

Basics of Hardware and Software

A **computer system** is made up of two main components:

- 1. Hardware** – The physical parts of a computer that can be seen and touched.
- 2. Software** – The set of programs and instructions that tell the hardware what to do.

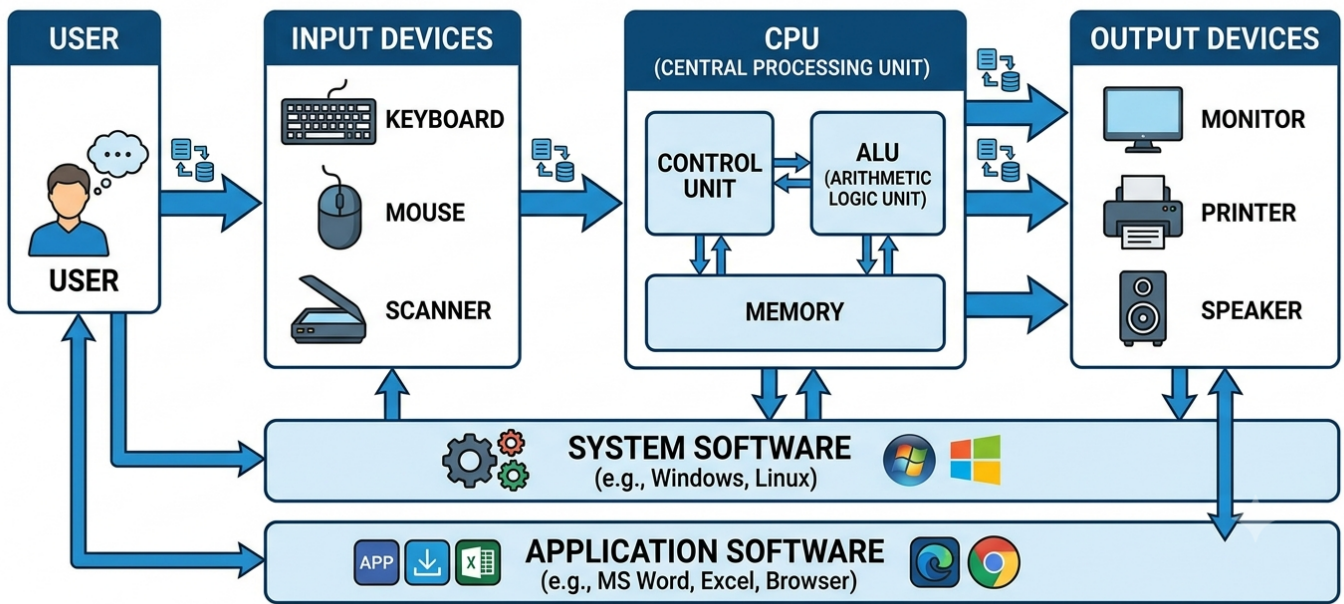

Both hardware and software work together. A computer cannot function properly without either of them.

Examples

3. Monitor
4. CPU
5. Printer
6. Scanner
7. Hard Disk
8. RAM
9. Motherboard
10. Speakers
