

Mouse

A **Mouse** is one of the most commonly used **input devices** of a computer. It is a **pointing device** that allows users to control the cursor (pointer) on the computer screen. Using a mouse, users can select files, open programs, draw pictures, play games, and perform many other tasks quickly and easily.

The mouse makes interacting with a computer simple because users can point, click, drag, and drop objects instead of typing commands.

(Mouse) is a type of **input device** used to interact with a computer. It is a **pointing device** that allows users to control the cursor (pointer) on the computer screen. The mouse is used to select files, open programs, draw pictures, play games, and perform many other tasks quickly and easily.

The mouse is a type of **input device** used to interact with a computer. It is a **pointing device** that allows users to control the cursor (pointer) on the computer screen. The mouse is used to select files, open programs, draw pictures, play games, and perform many other tasks quickly and easily.

The mouse is a type of **input device** used to interact with a computer. It is a **pointing device** that allows users to control the cursor (pointer) on the computer screen. Inventor of Mouse (Douglas Engelbart)

Inventor: Douglas Engelbart
Year: 1964

First Demonstration:

1968

Types of Mouse (Mouse Types)

1. Mechanical Mouse (Mechanical Mouse)

- Uses a rubber ball.
- Older technology.

Diagram: Mechanical Mouse components (Rubber Ball, Mechanical Switches, Mouse Cord, Mouse Button, Mouse Body)

2. Optical Mouse (Optical Mouse)

- Uses LED light.
- Most commonly used today.

Diagram: Optical Mouse components (LED Light, Optical Sensor, Mouse Cord, Mouse Button, Mouse Body)

3. Wireless Mouse (Wireless Mouse)

- No cable required.
- Uses Bluetooth or USB Receiver.

Diagram: Wireless Mouse components (Mouse Body, Mouse Button, Bluetooth/USB Receiver, Mouse Cord, Mouse Battery)
