

Output Devices (显示器)

An **Output Device** is a hardware component of a computer that displays or presents the processed information to the user. After the CPU processes the input data, the output device converts the digital result into a human-readable form such as **text, images, audio, or video**.

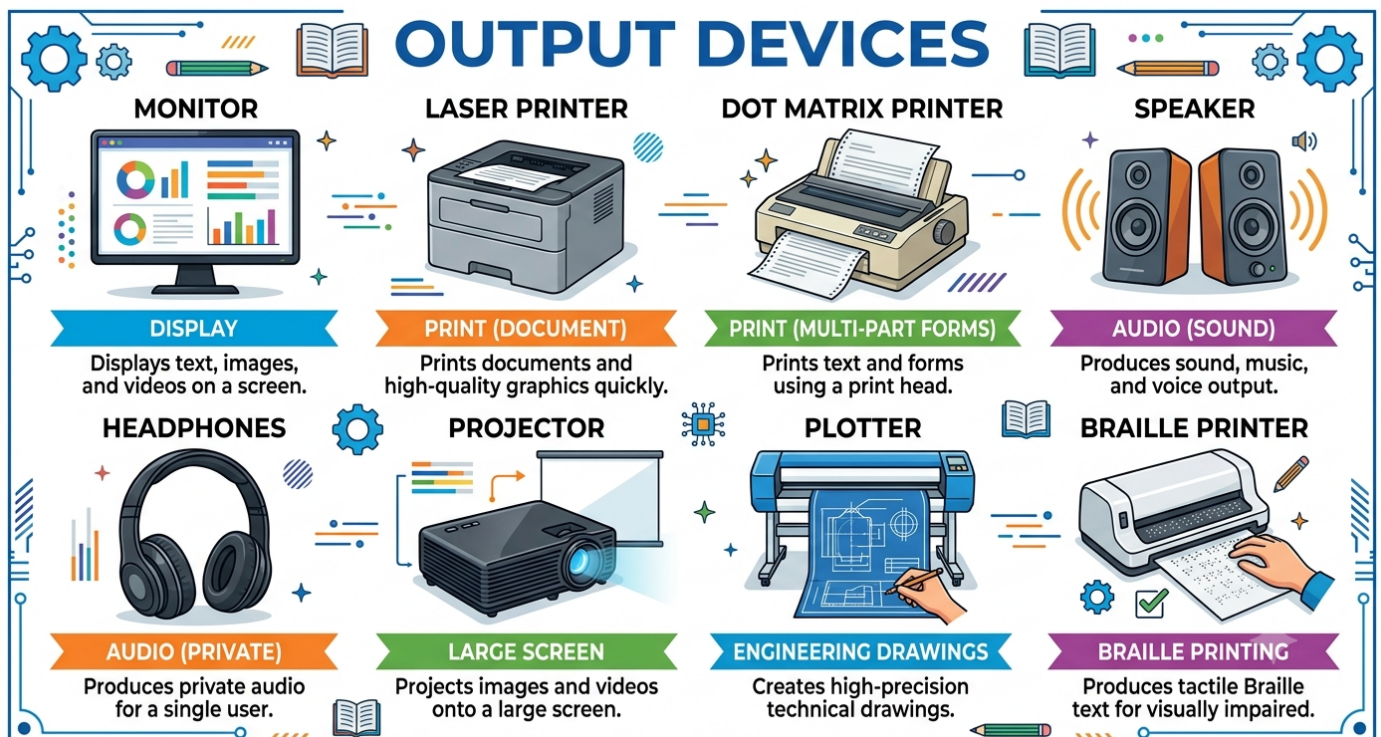

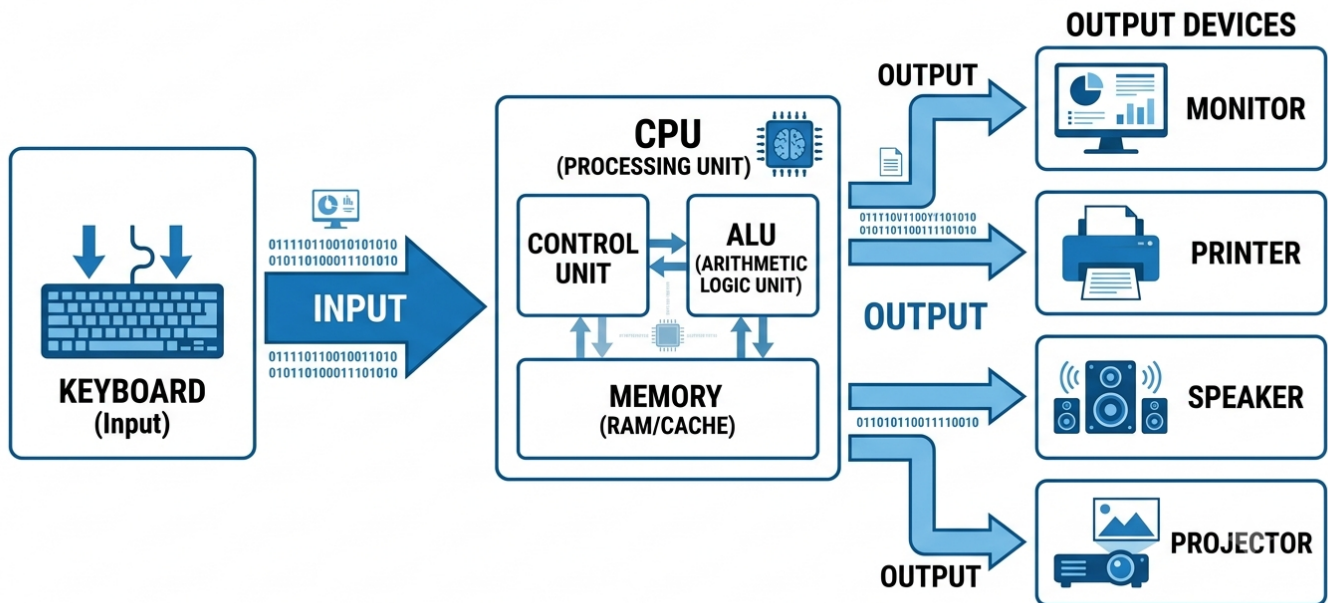

Output devices help users understand the result of the work performed by the computer.

“**Output Device** = 将计算机处理后的结果 (Result) 以用户可读的形式 (Human-readable form) 呈现给用户 (Present to the user) 的设备 (Device)。”
