

# Types of Digital Computer

## TYPES OF DIGITAL COMPUTERS

### 1. Micro Computer ( )

A **Micro Computer** is a small, affordable, single-user computer that uses a **microprocessor** as its CPU. It is designed for personal use.

Microprocessor is a small, integrated circuit (IC) that contains the CPU and memory. It is used in microcomputers, embedded systems, and other applications. The microprocessor is the central component of a microcomputer, and it is responsible for executing instructions and controlling the flow of data.

#### Features ( ) :-

- ✓ Small Size ( )
- ✓ Low Cost ( )
- ✓ Single User ( )

✓ Easy to Use (□□□□ □□ □□□□ )

✓ Low Power Consumption (□□ □□□□ □□ □□□□ )
